1. Create a program that asks the user for their age and prints whether they are a child, teenager, adult, or senior citizen based on the age ranges: 0-12, 13-19, 20-59, 60 and above.
2. Write a program that prompts the user to enter a year,check whether the given year is leap year or not
3. Implement a program that checks if a given number is even or odd using both if-else statements and ternary operator, and prints the result accordingly.
4. Write a program that takes three integers from the user and prints the largest number using if-else statements.
5. Write a Python program that asks the user for their exam score (0-100) and prints the corresponding grade
6. Write a program that takes the x and y coordinates of a point and determines which quadrant the point lies in.
7. Write a Python program that asks the user for two numbers and an arithmetic operator (+, -, *, /) and performs the corresponding operation.
8. Write a program that simulates a simple login system. The correct username is "user" and the correct password is "pass". The program should ask for the username and password and print "Login successful" if both are correct, otherwise print "Login failed".
9. Create a program that asks the user for their age and checks if they are eligible to vote (age >= 18).
10. Write a Python program that takes three integers from the user and prints the smallest number using if-else statements.
11. Create a program that asks the user for a number and checks if it is divisible by both 5 and 11
12. Write a program that asks the user for their weight (in kg) and height (in meters) and calculates their Body Mass Index (BMI). Based on the BMI, print the corresponding category:
    - Underweight (BMI < 18.5)
    - Normal weight (18.5 <= BMI < 25)
    - Overweight (25 <= BMI < 30)
    - Obesity (BMI >= 30)

13. Create a program that asks the user for a number (1-7) and prints the corresponding day of the week (1 for Monday, 2 for Tuesday, etc.).
